Why Claims Are Delayed

Claims Reported Over Time

handling_unit	Avg Days To Settle	Max of sla_days	% Claims Delayed
Health Claims	15.16	14	48.3%
Life Claims	33.11	30	51.9%
Motor Claims	23.80	21	50.2%
Property Claims	37.53	30	55.8%
Total	**20.06**	**30**	**49.5%**

Property Claims has the highest delayed claims rate, while assessor delays are the most frequently recorded delay reason. These areas may warrant further investigation.

Management Summary

Insurance Policy Persistency & Claims Performance Analysis

MANAGEMENT SUMMARY

Project Overview

This project analyses insurance policy persistency, renewal performance, claims handling, customer satisfaction and payment behaviour to identify areas for business improvement.

Key Findings

- **Policy Persistency:** Motor Comprehensive has the largest policy portfolio, while Motor Third Party has the lowest active-policy rate among the products analysed.
- **Renewals:** Agent channels recorded the highest renewal rate at 88.3%, while Bancassurance recorded the lowest at 73.7%.
- **Claims Performance:** Property Claims had the highest delayed-claims rate at 55.8%. Assessor delays were the most frequently recorded delay reason.
- **Customer Experience:** The renewal rate was 70.5% among customers with delayed claims, compared with 82.8% for customers with on-time claims. Average ratings were also lower for delayed claims.
- **Payment Behaviour:** Bancassurance recorded the highest missed-payment rate at 10.0%, highlighting an area for further investigation.

Recommendations

1. Investigate claims delays, particularly assessor-related delays and Property Claims SLA breaches.
2. Improve claims communication and follow-up to support customer satisfaction and policy renewals.
3. Review payment reminders and barriers to payment, particularly within the Bancassurance channel.
4. Prioritise follow-up with policies flagged by the lapse-risk analysis.

Conclusion

The analysis highlights opportunities to improve policy retention, claims turnaround time, customer experience and payment performance. Addressing these areas could support stronger persistency and better-informed business decisions.
